Product data sheet

Overview:

The Bently Nevada 330130-085-00-00 is a standard extension cable designed for use with the 3300 XL proximity transducer system. This industrial-grade cable extends the reach of your vibration sensors, providing greater flexibility for machine monitoring applications.

Key Features:

- **Extended Length:** Offers an 8.5-meter (27.9-foot) reach for versatile sensor placement.
- **Durable Construction:** Built to withstand harsh industrial environments with high temperatures and demanding conditions.
- **Reliable Signal Transmission:** Ensures accurate vibration data transmission from your sensors to the monitoring system.
- **Easy Installation:** Simple plug-and-play design for fast and efficient setup.
- **Broad Compatibility:** Works seamlessly with existing 3300 XL system components.

Technical Specifications:

- Part Number: 330130-085-00-00
- Cable Length: 8.5 meters (27.9 feet)
- Material: Industrial-grade cable jacket
- Compatibility: 3300 XL proximity transducer system

Applications:

- Machine monitoring and vibration analysis in industrial facilities
 - Extending sensor reach in hard-to-access locations
 - Maintaining optimal sensor placement for various equipment configurations
-
