Product data sheet

DESCRIPTION

[Data sheet](#)

Type ESX10-T. expands our product range of electronic overcurrent protection for DC 24 V applications.

It provides selective protection of all DC 24 V load circuits at a width of only 12.5 mm. This is achieved by active current limitation in the event of a short circuit and overload disconnection from 1.1 times rated current. The ESX10-T features one single trip curve for all types of loads, e.g. capacitive loads up to 75,000 μ F, d.c. motors, valve clusters. The integral fail-safe element has been adjusted to the current rating and the connected cable cross section.

The ESX10-T can be snapped onto symmetrical rails, ensuring ease of mounting in multiple circuits.
