Product data sheet

The R450 automatic voltage regulator (AVR) is the S-Series of industrial type, permanent magnet (PM) (auxiliary winding excitation)

The R450 includes advanced protections such as over-excitation limitation and voltage sensing loss, and also features voltage droop for genset parallel operation. The R450 is also equipped with a Load Acceptance Module (LAM) to handle load impact events.

Technology
Excitation mode
Rated excitation current
Regulation accuracy (+/- %)
Frequency range
Voltage setting range (+/- %)
kU/F limitation
